

# Recurssion Releation

## Assignment Questions

1. Find the value of  $T(2)$  for the recurrence relation  $T(n) = 3T(n-1) + 12n$ , given that  $T(0)=5$ .

2. Given a recurrence relation, solve it using the substitution method:

a.  $T(n) = T(n-1) + c$

b.  $T(n) = 2T(n/2) + n$

c.  $T(n) = 2T(n/2) + c$

d.  $T(n) = T(n/2) + c$

3. Given a recurrence relation, solve it using the recursive tree approach:

a.  $T(n) = 2T(n-1) + 1$

b.  $T(n) = 2T(n/2) + n$

skills

## Submission Guidelines:

- Answer all the questions in a single Jupyter Notebook file (.ipynb).
- Include necessary code, comments, and explanations to support your answers and implementation.
- Ensure the notebook runs without errors and is well-organized.
- Create a GitHub repository to host your assignment files.
- Rename the Jupyter Notebook file using the format "date\_month\_topic.ipynb" (e.g., "21st\_September\_GAN.ipynb").
- Place the Jupyter Notebook file in the repository.
- Commit and push any additional files or resources required to run your code (if applicable) to the repository.
- Ensure the repository is publicly accessible.
- Submit the link to your GitHub repository as the assignment submission.

## Grading Criteria:

- Understanding and completeness of answers: 40%
- Clarity and depth of explanations: 25%
- Correct implementation and evaluation of optimizer techniques: 15%
- Analysis and comparison of different optimizers: 10%
- Proper code implementation and organization: 10%

**Note:** Create your assignment in Jupyter notebook and upload it to GitHub & share that uploaded assignment file link through your dashboard. Make sure the repository is public.
