

Project Assignment Challenge

Advance Python Project Assignment:

1. Build a Flask app that scrapes data from multiple websites and displays it on your site.
You can try to scrap websites like youtube , amazon and show data on output pages and deploy it on cloud platform .
2. Create a Flask app that consumes data from external APIs and displays it to users.
Try to find an public API which will give you a data and based on that call it and deploy it on cloud platform
3. Implement OAuth2 authentication to allow users to log in using their Google or Facebook accounts.
4. Develop a recommendation system using Flask that suggests content to users based on their preferences.
